

Access & Entry Maintenance

An access control system needs regular maintenance to ensure your business is secure. After all you've invested in the technology so it would be almost criminal not to ensure its maintained properly.

No matter how good the system is you still need regular maintenance to ensure it continues to be good.

Its just like a car which needs an MOT as a minimum, just like your security and safety system need a minimum annual preventative maintenance inspection too.

Some need full maintenance, and of course some clients like the total piece of mind of being able to pay one All Inclusive price making budgeting much simpler.

Which ever option you need - we can tailor the plan to suit you.

Opportunist theft accounts for the highest number of thefts in businesses...

So access control plays a big part in reducing crime of this type. Making sure you access control system is working properly and spotting any potential problems early is essential.

You can almost guarantee the one time you really need your access system, they'll find there is a problem due to poor maintenance of something as simple as a door closer or lock for example.

Maintenance Plans

We offer a wide range of maintenance packages to suit your needs, from simple preventative maintenance to a full comprehensive parts & labour plan giving you total peace of mind

TOP TIP from our MD

Many businesses spend a fortune on the latest access technology and then forget the basics like looking after the locking systems & door closer. Without these essential devices any access control systems is rendered almost worthless if the door doesn't close and lock correctly!

That's why here at ASG Maintenance Division we also employ our own in-house locksmiths and hardware specialists to ensure that even these often forgotten components of an access system are catered for.
