Wotton Lawn Hospital

Barrier Install

Wotton Lawn Hospital is an 88 bed acute mental health hospital situated near the centre of Gloucester and provides inpatient services for the county of Gloucestershire.

Service users are supported by a variety of healthcare workers including nurses, doctors and allied health professionals such as psychologists, art therapists, physiotherapists, occupational therapists and sports exercise therapists.

Challenges

End-of-life car park barrier

Benefits

Seamless intercom and barrier integration

Reduced maintenance with reliable automation

ASGuk improved access, security, and efficiency at Wotton Lawn Hospital by replacing outdated systems with modern, cost-effective solutions. Their work delivered reliable automation, enhanced aesthetics, and seamless integration with existing infrastructure.

1 Project brief

ASGuk were instructed by Gloucestershire Health and Care NHS Foundation Trust to replace an end of life automatic barrier with a new solution at the entrance to the visitor carpark at Wotton Lawn Hospital. The brief included removing the existing barrier, removing the existing barrier base before installing a new concrete base to facilitate a new automatic barrier solution.

2 Design & Specification

During the design process Gloucestershire Health and Care NHS Foundation Trust identified a potential opportunity to relocate a FAAC Access Pro-L automated barrier from another of their hospitals which was surplus to requirements.

Following this conversation ASGuk completed an assessment of the existing FAAC Access Pro-L located at Tewkesbury Community Hospital. After a thorough review ASGuk were able to confirm that the automated barrier was in great condition and would be suitable for relocation to Wotton Lawn Hospital.

The key features of a FAAC Access Pro-L automated barrier are:

- Outstanding quality, reliability and durability
- Maximum lane width of 6.0 m
- Innovative drive technology
- Approved for use with movement of persons
- Numerous input and output functions which can be configured by the user

3 Installation & Delivery

The newly installed FAAC Access Pro-L automated barrier at Wotton Lawn Hospital has reinstated Gloucestershire Health and Care NHS Foundation Trust's ability to safely and effectively manage traffic in and out of the hospital's visitor carpark. As a result the inconvenience and risks associated with unauthorised parking have been significantly reduced.

The new automated barrier seamlessly integrates with the existing CAME intercom allowing the reception team to effectively manage carpark from the convenience of their office.

ASGuk is proud to have been able to design and install a cost effective automated barrier solution at Wotton Lawn Hospital.

Trusted specialists in advanced security & automation since 1989

Your security, our priority

For over 30 years, we've been making security, safety and automation easy for businesses like yours.

With tailored, fully integrated solutions and in-house expertise, we eliminate your headaches, protect your people and property and ensure everything works seamlessly – first time, every time and exactly as it should.
